

**Dwarf Korean Lilac On Standard**  
*Syringa meyeri 'Palibin (tree form)'*

Height: 7 feet

Spread: 6 feet

Sunlight: ○

Hardiness Zone: 4a

**Description:**

A beautiful and popular patio shrub with numerous attributes; striking spikes of fragrant lilac-pink flowers in late spring, small rounded foliage and a uniform compact ball shape grafted onto a standard, best used as a solitary accent in the garden

**Ornamental Features**

Dwarf Korean Lilac On Standard is smothered in stunning panicles of fragrant lilac purple flowers at the ends of the branches in late spring, which emerge from distinctive violet flower buds. The flowers are excellent for cutting. It has dark green deciduous foliage which emerges burgundy in spring. The small pointy leaves do not develop any appreciable fall color.

**Landscape Attributes**

Dwarf Korean Lilac On Standard is a dense deciduous dwarf tree, selected and trained to grow in a small tree-like form with the primary plant grafted high atop a standard. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a high maintenance dwarf tree that will require regular care and upkeep, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting butterflies to your yard. It has no significant negative characteristics.

Dwarf Korean Lilac On Standard is ideal for use as a garden accent or patio feature, and is recommended for the following landscape applications;

- Accent
- General Garden Use
- Container Planting

## Planting & Growing

Dwarf Korean Lilac On Standard will grow to be about 7 feet tall at maturity, with a spread of 6 feet. It tends to be a little leggy, with a typical clearance of 3 feet from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This dwarf tree should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.

Dwarf Korean Lilac On Standard makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
