

The Blues Weeping Colorado Spruce

Picea pungens 'The Blues'

Height: 6 feet

Spread: 6 feet

Sunlight: ○

Hardiness Zone: 2a

Other Names: Blue Colorado Spruce; Colorado Blue Spruce

Description:

Lush blue foliage drapes off downward flowing branches creating a pleasing waterfall of color year-round; this dwarf variety will reach 6 ft in 10 years; a sought after tree, it makes a stunning visual impact on the landscape; very hardy and adaptable

Ornamental Features

The Blues Weeping Colorado Spruce is a dwarf conifer which is primarily valued in the landscape or garden for its distinctively pyramidal habit of growth. It has attractive steel blue evergreen foliage which emerges silvery blue in spring. The needles are highly ornamental and remain steel blue throughout the winter. The rough gray bark adds an interesting dimension to the landscape.

Landscape Attributes

The Blues Weeping Colorado Spruce is a dense multi-stemmed evergreen shrub with a distinctive and refined pyramidal form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a high maintenance shrub that will require regular care and upkeep. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

The Blues Weeping Colorado Spruce is recommended for the following landscape applications;

Planting & Growing

The Blues Weeping Colorado Spruce will grow to be about 6 feet tall at maturity, with a spread of 6 feet. It has a low canopy, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 80 years or more.

This shrub should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species.
