

## Magic Carpet Creeping Thyme

*Thymus serpyllum 'Magic Carpet'*

Plant Height: 2 inches

Flower Height: 6 inches

Spread: 30 inches

Spacing: 10 inches

Sunlight: ☉ ●

Hardiness Zone: 4a

Other Names: Mother Of Thyme, Wild Thyme

### Description:

A prostrate, woody based variety primarily grown as ornamental groundcover; lilac-pink flowers appear on short stalks in summer; a very low maintenance plant, excellent for the rock garden

### Ornamental Features

Magic Carpet Creeping Thyme is smothered in stunning spikes of lilac purple flowers rising above the foliage from early to mid summer. Its attractive tiny fragrant oval leaves remain green in color throughout the year.

### Landscape Attributes

Magic Carpet Creeping Thyme is a dense herbaceous evergreen perennial with a ground-hugging habit of growth. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Magic Carpet Creeping Thyme is recommended for the following landscape applications;

- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Groundcover

### **Planting & Growing**

Magic Carpet Creeping Thyme will grow to be only 2 inches tall at maturity extending to 6 inches tall with the flowers, with a spread of 30 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 10 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 10 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in full sun to partial shade. It prefers to grow in average to dry locations, and dislikes excessive moisture. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider covering it with a thick layer of mulch in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
