

English Lavender
Lavandula angustifolia

Plant Height: 24 inches

Flower Height: 3 feet

Spread: 3 feet

Sunlight: ☉ ☐

Hardiness Zone: 6a

Other Names: Common Lavender

Description:

A beautiful and aromatic flowering shrub covered with volumes of lavender blooms through summer, excellent choice for low informal hedging and in borders and formal gardens; plant near doors and walkways where the lovely scent can be appreciated

Ornamental Features

English Lavender has masses of beautiful spikes of fragrant lavender flowers rising above the foliage from early to late summer, which are most effective when planted in groupings. The flowers are excellent for cutting. Its attractive fragrant needle-like leaves are grayish green in color. The foliage often turns coppery-bronze in fall.

Landscape Attributes

English Lavender is a dense herbaceous evergreen perennial with a mounded form. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This plant will require occasional maintenance and upkeep, and can be pruned at anytime. It is a good choice for attracting butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

English Lavender is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Herb Gardens
- Container Planting

Planting & Growing

English Lavender will grow to be about 24 inches tall at maturity extending to 3 feet tall with the flowers, with a spread of 3 feet. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 10 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is not particular as to soil type, but has a definite preference for alkaline soils, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This species is not originally from North America.

English Lavender is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, this plant may be too tender to survive the winter if left outdoors in a container. Contact our experts for more information on how to protect it over the winter months.
