

**Gay Butterflies Butterfly Flower**  
*Asclepias tuberosa 'Gay Butterflies'*

Height: 24 inches

Spread: 24 inches

Sunlight: ☉

Hardiness Zone: 3a

Other Names: Milkweed, Butterfly Weed

**Description:**

Masses of tiny blossoms in shades of orange, red, pink, or lemon yellow, attracts butterflies to the garden; blooms last several weeks, and plants are drought tolerant and resistant to pests

**Ornamental Features**

Gay Butterflies Butterfly Flower has fragrant orange flat-top flowers with red overtones and yellow eyes at the ends of the stems from mid to late summer. The flowers are excellent for cutting. Its narrow leaves remain green in color throughout the season.

**Landscape Attributes**

Gay Butterflies Butterfly Flower is an herbaceous perennial with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a high maintenance plant that will require regular care and upkeep, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Gay Butterflies Butterfly Flower is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Naturalizing And Woodland Gardens

### **Planting & Growing**

Gay Butterflies Butterfly Flower will grow to be about 24 inches tall at maturity, with a spread of 24 inches. It tends to be leggy, with a typical clearance of 1 foot from the ground, and should be underplanted with lower-growing perennials. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under typical garden conditions. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species.
