

Yellow Tree Peony

Paeonia suffruticosa 'High Noon'

Height: 5 feet

Spread: 5 feet

Sunlight: ●

Hardiness Zone: 4a

Description:

A beautiful woody peony, producing huge, frilly, lemon yellow flowers with brushes of red; great as an accent in the garden or massed along borders; unlike perennial peonies, remember not to prune this variety

Ornamental Features

Yellow Tree Peony features bold lightly-scented double lemon yellow flowers with gold eyes and a dark red blotch at the ends of the branches from mid to late spring. The flowers are excellent for cutting. It has burgundy-variegated green foliage. The lobed compound leaves do not develop any appreciable fall color.

Landscape Attributes

Yellow Tree Peony is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and should not require much pruning, except when necessary, such as to remove dieback. It is a good choice for attracting butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Yellow Tree Peony is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use

Planting & Growing

Yellow Tree Peony will grow to be about 5 feet tall at maturity, with a spread of 5 feet. It has a low canopy, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 20 years.

MINOR'S
GARDEN CENTER, INC.

This shrub should be grown in a location with partial shade or which is shaded from the hot afternoon sun. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil pH, but grows best in rich soils. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.
